

Hosting for Centre

Hosting is offered to those districts interested in a professional hosting relationship.

We offer state-of-the-art hosting arrangements including multiple power grids driven by TXU electric, with PowerWare UPS battery backup power and dual diesel generators onsite. Our HVAC systems are condenser units by Data Aire to provide redundancy in cooling coupled with ten managed backbone providers.

Twelve more third party backbone providers are available in the building via cross connect. Fire suppression includes a pre-action dry pipe system including VESDA (Very Early Smoke Detection Apparatus) with over 700 smoke detectors between the two facilities.

Our network architecture utilizes the Enterprise routing and switching engines from Juniper and Cisco. We utilize Juniper M20 routers as border routers, Cisco 6500 series switches in our distribution layer and Cisco 6500 switches in our aggregation layers, and Cisco 3500 and 2900 series switches at the customer layer.

Our network is fully meshed and redundant with 10 backbone providers. Our provider offers a 99.9% Service Level Agreement, taking the hassles and costs of hosting out of your budget.

We've never met a district or school technology department that was overstaffed or underworked. Reduce your hassles and keep your focus on the workload you already have. Depend on us to keep your Centre installation up and running.
