

Student Billing Module

The Student Billing module allows you to maintain student balances and payments. From one simple-to-use program, you can assign a fee to students in any course, class, or activity, using Centre's familiar searching interface. You can even assign fees based on the user-defined fields and various other search criteria (for instance, all students that failed a course, or all students that missed more than 10 days of school). Additionally, you can assign, pay, and waive fees on a per-student basis.

The Billing module uses a credit and debit system, so your school's accountant should feel comfortable using the program. Additionally, parents and students can track their fees and payments online in real time.

The Billing module offers a wide variety of reports tracking daily billing transactions, daily totals, lunch menu totals, balances, and fees. And, the Billing modules prints invoices and letters that can be mailed directly to parents.

Furthermore, the Billing module can be integrated with the food service system, tracking food service transactions and payments. An optional cafeteria POS program is available that plugs right into the Student Billing module.

Your school or district will certainly find that the Student Billing module is the perfect way to keep track of book, enrollment, activity, and any other fees your district charges.
